HOW TO
Talk to your children about the internet
CHAPTER TWO

Why should I talk to my children about the internet?

Because knowledge is power
In a world that is constantly changing, we understand that our children are now growing up faster than ever before. In this super-wired age, we can help to avoid pitfalls by keeping one step ahead of the exploding internet boom. By teaching ourselves to learn the best ways to inform our children, we can protect them from some of the risks of being globally interconnected: the dangers of misusing the internet.

Striking a healthy balance between the real world and the online world
Indoor/outdoor activities, real/virtual interactions, real/virtual learning
Playing games, chatting on the computer, texting friends... all these activities have become part of our daily routine. But because children start enjoying these activities at an increasingly young age nowadays, parents really need to find the right balance for them to ensure that they still get a healthy amount of time in the real world too – playing with friends, exploring, being outside, playing sports. Key here is a healthy combination between digital activities built around learning and entertainment with exercise, exploration, real time with friends, family and the outside world.

Our tip: Talk openly with your children or pupils about the importance of a healthy daily schedule that divides the hours of the day between 1) school & homework 2) online activities like gaming and entertainment 3) outdoor activities and play time, and 4) of course, quality time with friends and family.

&groupId=10137

Truth: Once something goes online, it is incredibly difficult to delete
Although it may seem that we can delete online posts because they appear invisible, the posted information has already been loaded onto the internet. Once something is online, it is online forever. In a spur-of-the-moment rant or instant post of ourselves doing something ridiculous at a party, there’s no real ‘undo’ or ‘delete’ button to push. The images and text posted can turn criminal, harming others or even ourselves, as these can turn viral in a matter of seconds. Images can be misused, altered, and even shared within inappropriate networks, so
it’s important to think before posting. Too often, surveys about children’s and teens’ attitudes about the internet show that a majority is not concerned with the invasion of their privacy or the anonymity of the person they interact with.

**Avoiding stranger danger**
Connecting with strangers through social media networks can sometimes be risky for our children if they make the wrong connections. As there is no real way to determine whether a person’s social profile is actually who they say they are, we can arm ourselves and our children with the knowledge of when an online connection or relationship turns dangerous to avoid trusting those who may be online predators. The best way to keep track is to make sure you know who all of your children’s social media connections are. The age at which a child should be allowed to have a social media profile is up to every parent to decide, but from that point on, you should have a good handle of who your children are “friends” with online. If they’re not relatives, if you don’t know them from your children’s school, or through other families you know in your community, then they deserve a second look.
Cyberbullying

What may seem harmless online to us can actually be troublesome for others. Thinking about how we “talk” to each other online and how we use the internet to connect with others can help us determine between something that is cyberbullying behavior and what is socially acceptable online.

In Malaysia, a 2014 nationwide survey, which could someday be very representative of the rest of Asia, found that half of children are unsupervised when online. And today, as many as one in four schoolchildren reported that they had been bullied online, with children aged 13 to 15 being bullied the
most. Online harassment is also high – nearly three in every four children say that they experience it. It was defined in the survey as calling other children mean names, posting improper messages and inappropriate photos. Perhaps most worrisome? Two-thirds of children feel that sending improper SMS-es, posting inappropriate photos, and pretending to be someone else is NOT cyberbullying. Cyberbullies often do not realize the consequences of their actions or that they might be cyberbullies themselves.

Examples from across the world may also be important to know about in Asia. A UK study in 2013 studied more than 2,000 British teens and found that seven in 10 young people between ages 13 and 22 have experienced cyberbullying. One in five of those teens consider theirs to have been extreme cases. In a 2014 survey of 10,000 youths, more than half of young people “reported that they have experienced cyberbullying” using Facebook.

But it doesn’t have to stay like this. In the USA, a 2011 Harvard School of Health study showed that schools that have anti-bullying programs reduced bullying by half, with the worst at middle school (usually between ages 11 and 14).

And in Norway, more good news. In 2009, Telenor Norway and partners created a national program against cyberbullying. It reached hundreds of schools and tens of thousands of students, giving children, parents and teachers information on how to prevent cyberbullying. Results since then? Three out of every four children who took part say that they now have what they need to know in order to avoid bullying via mobile phone and the internet.

Goes to show what a difference simple conversations – at home and at school – can make!
Online sales fraud and identity theft of personal information

We instinctively know when something seems too good to be true, but sometimes we need a little help sorting through the mass of information. Salespeople are trained to be incredibly effective in their sales pitch, but sometimes it isn’t really clear whether buying something online is acceptable or not. Teaching ourselves and our children to spot potentially fraudulent activities online can help save us from theft, wasting our money, and sparing us the headaches. Questioning where and when we share our personal information – photos, credit card and bank account numbers, and addresses – can save us from having other people falsely use our personal information.

Gaming
It’s the go-to source of entertainment and no doubt your children will come to you, pleading to let them have gaming devices and consoles. When in moderation, gaming is fun, it can be educational, social, and some studies have even shown that some games can also boost hand-eye coordination. However, too much gaming can also be unhealthy, anti-social and expose your child to online risks. Here are some important points to consider.

Concerns for Parents
Spending too much time playing games can have negative effects:
- Preoccupation with playing games interferes with fundamental activities such as eating, sleeping, and going to school or work
- Social withdrawal from friends and family
- Depression and/or anxiety
- Inability to face and deal with real-life problems; the virtual world is used as a retreat from real-life problems

How Can I Keep My Child Safe?
- Be firm in setting time limits for your child
- In addition to letting your child know that you have set time limits, use a timer or monitoring software that shuts your child’s computer or Internet off once a specified amount of time is up
- Remember that gaming is ok—in moderation. Allow your child to play fun and appropriate games, but also encourage other healthy interests in friends, sports, and extracurricular activities to help your child maintain balance
• If you think your child is already addicted, seek help from your school or community.

Sourced from: Internet Safety project
https://www.internetsafetyproject.org/wiki/online-games-addiction

**Digital addiction**

• **Determine if your child has an addiction or if he or she is simply spending too much time online.** How does your child behave when they are away from the computer or their mobile devices? Are they depressed or irritable without? Are they happy and content with them?

• **If you suspect that they are addicted to internet, sit down with them in a non-confrontational way and have an honest, positive conversation about your concerns.** Laying down some serious guidelines within a discussion that is constructive and that does not scold them may help them begin to balance their usage and normalize behavior. If the problem continues, or you think the computer time is masking depression or anxiety, see your child’s doctor for advice. Also, check in with the school counselor and see if there is something going on at school.

• **Don’t take away the computer.** This may seem like the best solution, but it can be very damaging to addicted players, who may feel that playing online games is the only thing that brings them any enjoyment. Removing the computer can make them depressed, and possibly even violent. It can also affect the level of your child’s trust in you.

• **Don’t hesitate to get professional help.** Addictions are hard to break, and dependencies can often be a child’s only coping skill. You may need someone else to help you solve this problem.

https://www.commonsensemedia.org/blog/setting-computer-limits-tips#

**Virus attacks and malware threats**

Opening ourselves up to the vast internet also opens ourselves up to hackers and virus malware that can plague our computers, devices, and important files. Virus programs usually appear to be harmless links; learning how to avoid these will help keep our devices and computers healthy.

• To be safe on the internet, it’s important to know the security risks and how to protect yourself. These guidelines might help.

• Use anti-virus, anti-spyware and spam-filter software on your computer

• If your computer starts behaving strangely, it may have a virus – contact an expert immediately

• Disconnect from the internet when you’re not using it

• Always protect your computer and online accounts from viruses and hackers
  - Protect your online accounts by using strong passwords. You can strengthen your passwords by including capital letters, symbols and numbers.
  - Keep your email address private and take care when you open or answer emails from people you don’t know
• Make a habit of scanning email attachments before opening them
• Password protect your computer and phone

Age-inappropriate content
We get that our children are curious beings. It’s what makes them so great. But be aware that online content may be unregulated content, depending on where you live. Adult content can often be easily found by little fingers with unrestricted access, so it’s a must to educate our children about what is okay and what is definitely not okay. Have a discussion with your children about accessing content, whether through the internet, gaming, social media, and related apps that highlight alcohol and drug use, and pornography.

• For starters, activate the content filters on your web browser, and turn on tools like Google, Safesearch and Youtube safety mode ... just as you would the club or team they want to join, ask yourself: will my child benefit from this content? If not, filter it out.

• Consider the people behind certain websites or networks? What are the values of the website, network or company that creates this content? Is this really an age appropriate place for my child?

• Be sure to look beyond the homepage or first two pages of the websites your child spends time on. Click 7 – 10 pages deep, read message boards or comments from other users and then see what you think about the content. This is key to knowing what content and culture your child is immersed in.

So, what are the popular internet apps and websites that parents should be aware of?

It’s important to note that for all of the apps described later, all parents should strictly adhere to recommended age restrictions issued by the app or service provider.
So, what are the popular internet apps and websites that parents should be aware of?

Facebook

Considered the largest social networking site on the internet, Facebook’s global reach enables its users to share posts, images, notes, and even purchase some items online. Facebook is a great way to keep up with friends and family, and the ability to connect to those around the world make using the app rewarding. Parents should be aware that users younger than 13 years of age should automatically have a private profile, so it’s important to be truthful in setting up the user profile to prevent unwelcome Facebook friend requests.

How can I make sure my child isn’t sharing too much on Facebook or Instagram?

Take a two-pronged approach. First, probe a bit to find out if your children might be at risk for oversharing. Reserve judgment until you’ve heard your children out; a heavy-handed approach can lead to them shutting you out.

Ask about what types of things they and their friends share. Make sure they’re not feeling pressured to post things they’re uncomfortable with. And discuss the risks of oversharinig, which include damage to one’s reputation and regrets about sharing personal information.

Second, check in about privacy settings. Children don’t always think through the consequences of their actions. That’s when privacy settings really matter. Even if children do think before they post, if their privacy settings aren’t enabled (or aren’t strict) they may be sharing more than they mean to.

Sourced from: Common Sense Media
YouTube

YouTube is the world’s most popular video-sharing website and mobile application. Imagine YouTube as an internet television where you and your children choose when and what you want to watch – you have all the power. It’s like an infinite library of videos, TV clips, movies, music videos, and other content such as video blogging, short original videos, and educational videos. About YouTube, it’s important to know that most of the videos have been uploaded by individuals who have registered accounts on YouTube, which anyone can do. Anyone can watch videos, but registered users can create ‘channels’ and upload video files to them. Videos considered to contain offensive content are available only to registered users affirming themselves to be at least 18 years old, however this is quite easy for curious children to get around. This is another application and website that you should only allow your children to watch with your supervision when they are still young.

Chatroulette

Invented by a teenager seeking to extend his network outside of snowy Moscow, Chatroulette’s following has exploded worldwide. A crazy-addictive platform allowing users to bounce around chatrooms using their webcams, it’s like speed dating on video over the internet. Though many of the chatters on the other end of the portal may seem safe, the sheer intimacy of Chatroulette enables users to invite strangers into their bedrooms for conversations that should remain outside the realm of children.
Ask.fm

A social site where users answer questions from friends and strangers that range from innocent – like favorite pop stars or latest tween fashion – to more questionable stuff such as age, hair color, where you live, and private information that is not appropriate for strangers. Precisely because Ask.fm is anonymous in nature, the questions asked are those that most don't feel comfortable asking (and answering) in the flesh. As a result, anything goes, and users are subjected to bullying, inappropriate behavior, and other far too personal inquiries. The lack of parent control procedures makes us (and you too, we bet) want to keep this platform at arm's length.

Instagram

The app that everyone is using might actually be promoting a toxic mix of narcissism and insecurity for your children. Most of the photos posted on Instagram are selfies – images of the user taken by friends or by themselves. ‘Followers’ of the user can view, ‘like’ the image or video, and leave a comment. The latter can get terribly explicit and mean, since teens are posting photos of themselves in swimsuits, underwear, or even full on nudity. All of these are related to self-esteem problems, and are taken in the hope that their photo will garner ‘likes’ and positive comments from friends and strangers.
Tinder

Although intended for the 17+ crowd, Tinder’s privacy policy allows children 13 and older to register for its “fun way to connect” with people located in an area near the user. Tinder is known mainly for being a dating tool for “hook ups”, and profile pictures are rife with images meant for the more mature. Parents of younger users should be aware that the geolocation and anonymity features of Tinder could enable harassment and could make stalking easier for online predators.

Yik Yak

An “anonymous social wall for anything and everything,” all Yik Yak users are anonymous, making those who post almost impossible to track. Yik Yak’s news feed is entirely controlled by users who can vote for the popularity of the post. Although the app is targeted toward university students aged 17+, younger users have used it to post hurtful comments and threats.

Voxer

Users as young as four years old can download this walkie-talking app to exchange voice messages, making Voxer an immediate social connection platform. However, because messages can be recorded, cyberbullies can be even more hurtful when recording messages to be played back within group settings.

WhatsApp

A very useful app when used correctly, WhatsApp allows users to instantly message each other, enabling the use of shared photos within its platform.
**Snapchat**

Snapchat is intended for users older than 12. Snapchat users can send photos and videos that disappear within 10 seconds once they are received, making it a popular way to share inappropriate content. Users believe their images cannot be saved or sent virally, but it’s important to note that Snapchat pics don’t completely disappear from the user’s device.

**Kik Messenger**

Targeted to the 17+ crowds, there is no age verification to download Kik Messenger, an instant messenger app using a username rather than the user’s own phone number. Because of the perceived level of anonymity of Kik, “sexting” (sending explicitly sexual text messages) and cyberbullying are rife within this app.

**Vine**

A video-sharing app that limits videos to six seconds or less, Vine has become a platform that contains sexual images, drug use, nudity and inappropriate language, but then again, Vine also contains videos of puppies, kittens and babies as well. If your children are on vine, their connections will determine which of these things they might see.

** Shots of Me**

Only available on Apple devices, this is the selfie-craze for the 12+ crowd. Although Shots of Me users are not able to place comments under photos that are shared on this app (eliminating cyberbullying), the app enables a user’s location and timestamp, making it easy to find anyone who uses it.
CHAPTER THREE
What should I say?

It isn’t easy to be a parent today, as the social media revolution isn’t fizzling out. To use the internet and its apps responsibly, we’ve rounded up some tips and tricks for starting the conversation with children.

Start the conversation
You know your children best. Sit down with them and discuss the benefits of the internet – from learning to social networking to providing entertainment to creating opportunities. Together, discover the ways in which the internet will broaden their horizons. In the same conversation, have a realistic plan for avoiding misuse of the Internet. Use the language best suited to your relationship to create a safe, open dialogue.

If your children already use the internet, find out what sites and apps they are using, how these apps work, and whether they have had any challenges with them (like contact with strangers and cyberbullying). Let your children know that if someone is making them feel uncomfortable or if someone is saying harmful or hurtful things to or against them online, your children won’t get in trouble with you. They should feel comfortable in telling you about any negative online experience they have and know that you will find ways to help them.

Get familiar with internet etiquette
Just like there are social rules within our local communities, there are basic online rules that we should follow online. The most important thing to ask ourselves – ‘should I really be posting this?’ and ‘will someone be hurt or offended by this post?’ Taking 10 or 30 seconds to review what we post online and the repercussions of such posts are part of our social responsibility.

We like to follow the idea that if a post isn’t something we would share with our family, it’s probably a good idea not to share it online either.

Create rules yet realize that you can’t monitor your children’s moves online at all times
Create general online rules to keep your children safe and smart. Make a rule that your children must ask your permission before downloading any apps on their mobile device so that you’re aware of them. When your children want to join social media platforms, set the profile security settings together to choose the ones you’re most comfortable with.
Advise your children not to share passwords with anyone
This includes best friends and boyfriend or girlfriends. Sharing passwords could potentially damage your child’s online identity, and it’s best to keep these for their own personal use.

Setting age limits on your children’s smartphones, laptops, tablets and desktops
As parents, you can usually set age limits on your children’s smartphones, laptops, tablets and desktops, disabling their ability to download or buy particular apps and programs. As software and hardware upgrade at lightning speed, and with wearable technology making its way onto the scene, parents should familiarize themselves with user manuals to be able to understand how they work, thereby creating a safe environment for their children.
On computers and any other devices your child has access to, set the parental controls to the appropriate age, and enabling access to only appropriate content. There are many versions of parental controls on the market and are available at a range of prices, starting at free.

Make sure your child is accessing only age-appropriate content by checking out the age ratings on games, online TV, films and apps.

Discuss with your older children what they should or shouldn’t be showing their younger siblings on the internet, mobile devices, games consoles and other devices.

Discuss with other parents and also your children’s teachers what age they think is appropriate to buy children devices that connect to the internet.

https://www.getsafeonline.org/safeguarding-children/6-to-9/
Important questions to ask your children about the internet

Before we get to the key questions every parent should be asking their children, it’s important that one fundamental mindset is adopted – that the online world is for children only when their parents are part of it too. Be engaged with your child when online, play games with them, create a positive environment of sharing and learning and keep a running dialogue about the internet open, honest and constructive.

For those children who are already wired in the internet community, here is a list of very good questions to ask your children about their usage†

Q1

**General tech use**

1. What is your favorite website? What do you do on these sites?
2. What websites are your friends into these days?
3. Are you ever contacted by someone online that you don’t know? If yes, what did they want? What did you do? How did you respond?
4. Have you ever received a text message from someone that made you upset? How did you respond?
5. How do you keep yourself safe online?
6. Do you get concerned that people will read what others have written about you online that is not true but think it’s true?
7. Do you ever talk to anyone online that isn’t in your school?

† (Source: Sameer Hinduja, Ph.D. and Justin W. Patchin, Ph.D., ‘Cyberbullying Prevention: Questions Parents Should Ask Their Children About Technology’, August 2013)
Q2

**Cyberbullying**

1. Do you ever argue or post hurtful updates on your Instagram, Facebook, Twitter or other social media site? Why?

2. Have you ever had to delete a post or comment on your page that was written by someone else?

3. Does cyberbullying happen a lot? Would you feel comfortable telling me if you were being cyberbullied?

4. Do you think your school takes cyberbullying seriously?

5. Have you ever had to contact a teacher or someone else at school because of a cyber-threat? If so, did they do something about it and did it help?

6. Does your school have a way to anonymously report bullying and cyberbullying?

7. Do you feel like your friends would be supportive of you if you told them you were being cyberbullied?

8. Do you ever get verbally attacked during online games?

9. Have you ever had to leave an online game because someone was bothering you online?

10. Have rumors ever started about you in school, based on something said online?

11. Did you ever find out who started the rumor? What did you do when you found out?

12. Have you ever blocked somebody online because you felt harassed? If so, did that make it stop?
1. Do you send pictures through text? Do you receive pictures? If so, from who?

2. Are children in school taking a lot of pictures with their mobile phone cameras? What do they do with them?

3. Do you ever Skype or FaceTime with friends?

4. Do you use Snapchat? Can you explain to me how it works? Do you think pictures are really completely gone?

5. Have you ever had anyone do or say anything inappropriate on Skype or Snapchat?

6. Do you know what sexting is? Has any adult at school ever talked with you about sexting?

7. Has a stranger ever sent you explicit texts? What did you do with these texts?

8. Has a friend ever sent you explicit or offensive texts or pictures?

9. Do you know about the consequences that can result if you send inappropriate pictures (child pornography laws)?
HOW TO

Talk to your children about the internet

safe internet
Q4

Safe Online Social Networking

1. What social networking site do you use most frequently? How many friends or followers do you have?

2. What kind of people are you meeting on Instagram and Facebook? Are you connecting with people that you know? Or are you meeting people around the world?

3. Do you get a lot of friend or follow requests from strangers? If so, how are you handling that?

4. Do you use Twitter? What for? Who do you follow and who follows you?

5. Do you know how to use the privacy settings on Instagram, Facebook, and Twitter?

6. Do you have them set so that only those you accept as friends can see what you post? How do you know who can see your information?

7. What kind of personal information are you posting online? Have you ever posted your full name? Age? School? Phone number? Current location?

8. Have you ever been tagged in a picture in a way that made you upset?

9. Do you know how to edit your privacy settings so that if somebody wants to tag you in a post or photo, you have to approve it?

10. Do you know how to un-tag yourself in pictures?

11. Do you feel like social networking sites should be used to vent your frustrations? Do your friends vent on social media? Do people comment? What do they say?

12. What kind of videos are you watching on YouTube? Do you ever post videos?

13. Have you ever reported inappropriate videos that you have seen on YouTube? Or any other website?

14. Does anyone else know your password or passcode for any site or social media app? What about for your computer or mobile phone?
CHAPTER FOUR

Real-life stories of children and the internet

If you’re asking yourself, “how does my family fit into the internet universe?” here are some answers. Families and young people in Bangladesh, Myanmar, India and Thailand tell their stories from first-hand experiences on how the internet has become a powerful tool in their lives, the challenges they have faced, and the lessons they’ve learned.
Uzma Muyeed is a 43-year-old freelance interior designer in Bangladesh, and mother of two teenage children aged 13 and 19. Ms. Muyeed’s children spend up to four hours per day on the internet, with more use on the weekends. In Ms. Muyeed’s home, the “internet is a great way to stay up-to-date on the news, do research for school projects, and communicate with friends,” as the family has embraced its capabilities for work, research and social networking.

Ms. Muyeed says that the most popular internet trend affecting her children in Bangladesh is Facebook events. Ms. Muyeed believes that the “internet makes it very easy for someone to create a whole new, fake identity using all the information given on social networking sites.”

Keeping her children safe from online predators and cyberbullies is a concern that many parents feel worldwide. As an informed parent, Ms. Muyeed can empower her family to stay safe online by keeping an open communication with her children, and having an open dialogue with them about their Facebook connections. In addition to teaching them about stranger-danger online, Ms. Muyeed can ask that her children share little information about themselves on the portion of their Facebook profiles that can be accessible by the public.

Here’s what Facebook is doing to help parents like Ms. Muyeed keep the internet safe for her children:

Children under 13 are automatically given a private profile on Facebook. Strangers cannot automatically see the personal data on those younger users’ profiles unless they connect via Friend Request. Facebook users can adjust their Account Settings to “Private,” making all links, comments, profile pictures, and friend lists inaccessible to strangers. Additionally, parents can ask their children to be cautious about what “Friends” they accept on Facebook, with the awareness that not all “Friends” may be who they say they are.
Nitipong Boon-long is a 45-year-old father of two tween boys, ages 9 and 12. Mr. Boon-long’s family is fortunate to have three mobile phones and four iPads in the home, which results in heavy-internet usage for his family “all day long whenever possible.” He feels the most important use of the internet is for “knowledge and games.” Mr. Boon-long’s boys are heavily engaged in popular online games such as Fifa15 and Minecraft, with tablet use being the device of choice within the home.

Mr. Boon-long considers his family’s biggest concerns for internet safety to be “hacking private information and billing fraud,” which can be rampant within gaming environments. As most of the boys’ internet use is within the home, Mr. Boon-long has the ability to monitor usage, however, it is not possible to be at home with the boys all of the time.

Boon-long says that parents can empower their families to learn about when NOT to click. In many gaming environments, pop-up ads and top-up schemes entice younger users with hard-to-believe offers, many through seemingly “safe” and “cute” images. Educating younger users to not click without adult permission will reduce the risk of hackers, disabling fraudulent activity. Additionally, many devices, apps, and programs sometimes have settings to prevent users from “clicking” on fraudulent banners and ads. Parents would benefit from reading user manuals and getting acquainted with games to prevent identity theft.
Sudhir Jain is a 44-year-old finance professional, and father of two teenagers. His daughter Shreya is 16 and 14-year-old son Shreyansh are millennial children who were exposed to the digital world at a very young age. With four mobile devices at home, Sudhir’s family is constantly connected to the internet. The usage is varied – from online payments, ticket bookings, school projects, online shopping, games and social media. There is no aspect of their daily activity that is not touched by the internet. Sudhir’s children love to play Pacman, Candy Crush, Angry Birds, Temple Run and Subway Surfer on the devices.

Sudhir’s family reflects the way internet is consumed in India; the majority of traffic is driven by applications like Facebook, Whatsapp, Youtube, Instagram and ask.fm. Other popular apps include Hungama for music and Truecaller.

Sudhir feels that the biggest internet concerns for his family are phishing emails, defamatory messages and the threat of malware viruses. These threats are especially harmful for children who are accessing internet through smartphones, gaming consoles and tablets, spending as much as two to three hours per day online.

Sudhir has attended an internet safety workshop – Uninor WebWise – in his children’s school and likes to frequently research the topic to keep himself updated on risks and cyber threats. As a parent of teens, Sudhir, and parents like himself, have to be extra cautious in finding a balance between giving their children space, and educating them on the safety aspects. Sudhir feels it is important to make children aware of online ‘stranger danger,’ and teach them about appropriate Internet behavior. It is also important to protect children from cyber bullying and exposure to sexual predators. He feels that children should use the internet under the supervision of adults and should be guided to use it judiciously.
Ark Min Aung & Wai Yan Min Htay
Myanmar

Wai Yan is a young doctor from Yangon, fresh out of medical school and his peer, Arkar, also from Yangon, is a software developer who is now working on ways to give more Myanmar children access to online education.

Explains Arkar, “For people who have never experienced the internet, I would say that it is something that will connect them with everything and everyone in the world. I would tell them that the internet is where we are able to experience things by asking what we want to know rather than just consuming whatever the TV and radio provide. I would also tell them that by having a phone or a computer which is connected to the internet, they will be able to see, not just hear, their children or relatives who are working or living far away from them. It’s really wonderful when you think about it.”

Wai Yan says that the internet is a completely different ‘animal’ nowadays – just a few short years after he first got online. The most obvious difference, he tells us, is that with mobile phones and wireless internet, you can get online from anywhere and in essence, you can “be anyone.” On social media channels, you can hide behind fake profiles and surf the lives of others. You can spread fake information and also be victimized by fake information. A story he tells from his work in disease prevention in villages between Thailand and Myanmar is eye-opening. “Villagers at one point refused to take the vaccines we were providing them against Filariasis because they had read on social media that this was poison and would kill them,” Wai Yan explains. “Of course it’s completely untrue. And that’s only one example. The tip of the iceberg.”

Wai Yan says that what we all need to remember is to not believe everything we read on the internet, or believe people we are chatting with online whom we have not yet met in real life. The internet can – and is mostly used – for great things. He became a youth participant at the Telenor Youth Summit and traveled to Oslo because he found the chance to apply while on the internet. Without the internet, he would have never had this opportunity. Such things are more common than we realize, he says.
Wai Yan and Arkar both agree that supervisors and parents should take an active interest in how their children use the internet. Some parents are ignorant and think that nothing big can happen to their children by using the internet – good or bad. It is very important for parents to be curious and encouraging, but also to inform themselves about both the bright side and the dark side of the internet. Parents should make their children feel comfortable to talk to them when they encounter unsuitable materials on the internet too. If parents can guide their children in a positive way on how to use the internet, children will be able to benefit from the internet more than they ever dreamed, Arkar and Wai Yan say.
So, how do we continue to educate ourselves on safe Internet practices?

The reality is that with the rapidly-changing speed of the internet, there is no one house of information available to track your children’s online usage. What we can do, however, is continue to keep an open communication with your children to ensure they feel safe in sharing knowledge with us, and to report if something doesn’t seem quite right.

For those who have children kitted out with smartphones, there are apps available for parents who wish to track their children’s location, however, like Life 360, available free on Android and iOS. TimeAway is a free Android tool that enables parents to place blocks, app limits, track your child’s location, and schedule usage time on your child’s smartphone. Free app MamaBear on Android and iOS helps parents keep track of social media activity, manage app usage, and geo-locates your child with alerts when they arrive and depart destinations. You can also be alerted when your child adds contacts, uses words that are restricted or uploads and tags images on social media.

The ultimate but very high-priced internet monitoring software is mSpy, available for all devices and computers worldwide. Boasting more than a million users around the globe, mSpy is spyware for your children, tracking their web history, images, videos, email, SMS, keystrokes and more with a 256 bit encryption. In lieu of this fancy app, good old fashioned conversations and cooperation with your children to share their devices and their history will work too.
For the millions of first-time users and young children, the internet opens the doors to fantastic vaults of information and learning... but also to risks of online theft, fraud, bullying, abuse and malware. We’re all responsible for making sure our children are equipped not just with the means to access the internet, but with the right information to stay safe while learning and communicating on the internet.

It may seem a bit overwhelming to all of us because our children today are mostly getting on the internet with mobile phones – much harder to supervise and monitor all the time. Our children’s safety while being “online” on their phones is built by the conversations and trust that we have with them. That’s how they develop their life skills and grow their resilience in the online world. In combination with everything that we’ve read in this book, here are a few simple rules to leave you with.
Limit how much time your children spend online
Give your children a set amount of free online time to chat, play games or get on social sites, but after that, limit their computers’ or mobile phones’ use to homework or productive activities.

Keep talking and learning together with your children
Talk about and ask questions about technology with each other. Communicate openly and try to keep the tone positive and trusting. It’s important that your children know that they can talk to you – about good things and about bad things, like when they make a mistake on the internet or visit a site that they shouldn’t have. It’s important that they aren’t punished too harshly when they make a mistake because you don’t want them to not tell you about it the next time.

Share internet information and stay close
Have them show you their favorite websites and other internet services and make sure you have information for any accounts that they have online. Do not allow your children to share their passwords with anyone else but you. When your children are on the internet, try to keep a central area of your home for internet use only so that your children are at least nearby when they’re online.

The bottom line? Set rules, critique content and openly communicate with your children. Keeping children safe means setting guidelines and having critical and non-judgmental discussions about internet behavior. If your children feel comfortable with these conversations, they will be more likely to let you know when they run into a problem online – like a bully or a bad website or a questionable online personality. These are some of the keys to a safe and enriching online world.
**Internet Vocabulary**

**Algorithm**
Mathematical calculations based on procedural steps to process data and produce systematic reasoning. Example: Facebook’s algorithm helps users to discover content that is relevant to the user’s preferences and history. The Facebook algorithm also understand how a user likes to “be” on Facebook to show information relevant to the user.

**App**
Short for “application software”, and app is a computer program used on mobile devices such as smartphones and tablets. Example: Google Maps is an interactive map app that uses GPS (global positioning system) technology to help users with locations and directions.

**Blog**
Typically an informal, conversational website or web page authored by an individual or group. Example: suitcaseandstrollers.com, a travel blog written by Singapore mum blogger Aimee Chan.

**Chatroom**
A place on the internet that offers immediate, interactive communication with users.

**Cyberbullying**
Bullying behavior that occurs online, via chatrooms, social media, and e-mail. Cyberbullying is usually threatening and intimidating, and considered dangerous communication between Internet users.

**Embedded media**
Media files and players that are included in web pages, such as GIF animation, video clips, and audio players.

**Hacker**
An internet user who uses electronic data to gain access to other user’s data. Hackers can often gain access to personal information such as bank accounts and user profiles to perform identity theft.

**Online predator**
Someone who uses the internet to locate someone in a harmful way, especially someone who uses the Internet to lure children into danger.
**Platform**

In hardware and software, a framework that enables particular software to run.

**Search engine**

A program on the internet that provides search capabilities for users, usually by keywords and characters, to find information on the World Wide Web.

**Selfie**

When one takes a photograph of him or herself, this is called a “selfie”. Usually, selfies are taken with a user’s own smartphone and shared through social media.

**Social media**

Apps and websites where users interact in social networking on the internet, with content sharing capabilities. Popular examples are Twitter, LinkedIn, and Facebook.

**Social profile**

Within social networks, a user’s profile is that user’s identity, usually containing information about user’s location, user name, preferences, marital status, gender, and the like.

**Social wall**

In social media, a social wall is a section of a user’s profile where other users can write messages, share links and photos.

**Streaming media**

Media, like a video, a song, or even a football game that you watch online, when sent to your computer or mobile phone in a continuous stream of data over the internet.

**Viral**

Rapid spreading of information and content through social networks, websites, and email on the Internet.

**Virus malware**

Dangerous software programs on the internet that spread rapidly, usually in the form of spyware (software that spies on computers to extract personal data).

**Voip programs**

Voice over internet protocol software (and sometimes hardware) that enables telephone calls by internet transmission.

Chapter three

What should I say?

Chapter four

Real-life stories of children and internet
More than 500 million children across developing Asia will, in the coming years, be connected to the rest of the planet with devices no bigger than the palms of their hands. They will have instant access to information, people, languages and cultures, and will learn things never heard of by the generations coming before them. How will this happen? How will this tiny gateway open them up to the rest of the world? What will our children experience? What will they learn? Will they be safe? Will it make them happy? Will it change their lives?

This book is for the hundreds of millions of families across Asia who have been asking themselves these questions or who may soon begin asking them. It is for the hundreds of millions of families who hope that a world of opportunities and better lives await them and their children.

This book is for both the optimists and skeptics who might feel uninformed or confused by the great and rapid changes they are witnessing in the world around them – through new medicine, schools, farming, banking, and technology – and who wonder where it comes from, where it is going and how they can learn more.

This book is for anyone who has never been connected, who may have heard of something called “the internet,” mobile phones, “connectivity,” but don’t know where to learn more or how it all fits into their lives.

This book is the beginning of that conversation.

Warmest wishes, safe surfing and happy learning,

UNICEF AND GRAMEENPHONE
CHAPTER ONE

Introduction to the internet

Believe it or not, once upon a time, we relied on post, radio, television, print publications, and hardbound encyclopedias to connect with the world and to research information. To connect with one another, we could only rely on the connections made within our closed circles – friends, family, and the local community around us. And then the internet was born, and we became an interconnected global community that opened windows onto the world. Our lives were never the same again.

Some countries have had internet for more than 20 years now, and for many of us, today the internet feels like our friend. Linking the entire planet together, the internet is a vast resource for connecting us all together. We can use it for all kinds of things like studying for school projects, keeping in touch with our friends, bridging the gaps between generations, learning how to make popular recipes, selling handmade wares, watching popular entertainment or getting directions when we are lost. The internet allows us to search for job opportunities, find instructions on how to complete projects, manage our money, go shopping in other countries, research school assignments, publish our thoughts on online journals or “blogs,” and learn about all sorts of things that we never thought we could.

The internet now makes the world a smaller place at the touch of a button.
How to use the internet – the right way

1. Using the internet to learn and search for information
2. Using the internet to connect with one another

We can now use the internet to find information on just about anything. Really. Using search engines such as Google and Bing, we can type in a word or search phrase, and pages of indexed information on that subject pop up right in front of us. Through instructional videos on websites such as YouTube, we can learn how to cook a new recipe or how to fold a paper airplane. We can find information quickly, get weather warnings, food prices, research historical information, watch live cameras all over the world, and check out photos from places we dream of.

By email, social networking, chat, social media, online forums, VoIP programs, and more, we are globally connected now more than ever, having the ability to feel connected to everyone on the planet no matter where you are. In Bangladesh and Myanmar, mobile classrooms connect qualified teachers to rural communities, and the use of video chat can connect qualified doctors to patients in remote communities. Simply put, the internet is an amazing tool to bring together communities that otherwise would have limited access to each other.
TV, radio, games and the internet were once separate things. Now, the internet brings them all together in one powerful place. Internet entertainment can be found through YouTube, streaming media, embedded media like Windows Media Player and iTunes, online media, digital media receivers like Apple TV, Roku, Xbox, and Playstation.

Using sites like LinkedIn, Etsy, Amazon, Craigslist, Blogger and many others can create potential job opportunities, shopping and online sales opportunities, and the opportunity to publish articles in your own voice.

So now, not only is the world’s information ours to access at the touch of a button, but our voices are for the world to hear at the touch of a button as well. All because of the internet.
