

### Secure VPN Service

Our Wireless M2M VPN solution service provides additional security to the communication between your wireless M2M services and your central data center.

**Our M2M VPN solution includes:**

- The option of a best effort or business critical solution:
- A best effort based solution to connect devices over the local Internet using an encrypted tunnel to your central data center.
- A business grade solution using an end to end private network using dedicated fiber connection.
- A dedicated APN for with fixed IP block, ensuring security and improved Quality of Service (QoS).
- Multiple modes of M2M communications, such as device-to-server, device-to-device or both.

### Best Effort VPN

Connect your private APN within the GP wireless network to your internet gateway router via an encrypted IPSEC tunnel. Connectivity is provided over your existing ISP links, which is connected to the National Internet Exchange (NIX). The QoS of the VPN tunnel depends on the standard SLA offered by NIX and your ISP.
